

Co-location Program

Meeting the Need

Scott Data Center's co-location program is designed to provide companies offsite data storage and mission critical application support. If you require space for a single server for nightly data backup or you multiple servers that always need to be available for business, then the co-location program is for you.

Safe & Secure

The facilities "defense in depth" layered security systems and facility architecture help ensure that your data is protected. The facility itself is designed to withstand 200+ mph winds and security measures such as biometric identification and a comprehensive surveillance system help make sure your data is safe at all times.

Highly Available

The co-location program utilizes the highly available electrical and mechanical systems design of the Scott Data Center providing the user highlyreliable power and cooling. The Data Center utilizes a fully redundant UPS configuration for maximum power availability along with many other high end design features.

Co-location Cabinet Features

- › Custom designed cabinets with perforated metal doors
- › Dual power strip feeds from separate utility feeds available
- › Controlled access
- › 48" depth for large servers
- › RU size options available (full, half, and third racks)
- › Internet bandwidth available

Internet

The co-location program offers a variety of connectivity options. Users can choose to purchase bandwidth as part of their package, or users are free to negotiate with carriers directly for their connectivity needs without cross connection fees. Scott Data Center offers internet bandwidth packages from 1 megabit to 1 gigabit.
